

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (currently amended) An article of manufacture for use in a data processing system for installing an application program for execution on the data processing system, said article of manufacture comprising a computer-readable storage medium having a computer program embodied in said medium which causes the data processing system to execute method steps comprising:

defining a user configuration of the application program installation corresponding to a particular user of the application program;

encrypting and storing the user application program installation configuration in a manifest file;

determining that the stored user application program installation configuration corresponds to the particular user;

authenticating the particular user in response to the particular user requesting the application program;

decrypting the manifest file in response to the user authentication; and

building the application program ~~pursuant to~~ in a configuration customized to conform to the user application program installation configuration decrypted from the manifest file.

2. (Previously presented) The article of manufacture of claim 1 wherein the data processing system is a local data processing system, and wherein the computer program embodied in said medium causes the data processing system to execute the additional method steps comprising:

storing the user application program installation configuration on a remote server  
executing on a remote data processing system;  
initiating a session between the local data processing system and the remote data  
processing system in response to the particular user requesting the local application program;  
responsive to the user authentication, downloading data from the remote data processing  
system to the local data processing system according to the stored user application program  
installation configuration; and  
downloading the manifest file from the remote data processing system to the local data  
processing system.

3. (Previously presented) The article of manufacture of claim 2 wherein the computer  
program embodied in said medium causes the data processing system to execute the additional  
method steps comprising:

authenticating the particular user in a second authentication responsive to the particular  
user requesting a build of the application program;  
decrypting the manifest file responsive to the second authentication; and  
building the application program pursuant to the user application program installation  
configuration decrypted from the manifest file responsive to the second authentication.

4. (Previously Presented) The article of manufacture of claim 1 wherein the computer  
program embodied in said medium causes the data processing system to execute the additional  
method step comprising:

recording a description of items that are being used by the particular user.

5. (Original) The article of manufacture of claim 4 wherein the recorded description is  
used for administering licensing of the items.

6. (Original) The article of manufacture of claim 2 wherein the remote server is a web server.

7. (Previously presented) The article of manufacture of claim 1 wherein the user application program installation configuration comprises data describing the particular user, the particular user's application program user configuration, and resources for which the particular user is authorized.

8. (currently amended) A method of installing an application program for execution on a data processing system, said method comprising:

defining a user configuration of the application program installation corresponding to a particular user of the application program;

encrypting and storing the user application program installation configuration in a manifest file;

determining that the stored user application program installation configuration corresponds to the particular user;

authenticating the particular user in response to the particular user requesting the application program;

decrypting the manifest file in response to the user authentication; and

building the application program ~~pursuant to~~ in a configuration customized to conform to the user application program installation configuration decrypted from the manifest file.

9. (Previously presented) The method of claim 8 further comprising:  
storing the user application program installation configuration on a remote server  
executing on a remote data processing system;

initiating a session between the local data processing system and the remote data processing system in response to the particular user requesting the local application program;  
responsive to the user authentication, downloading data from the remote data processing system to the local data processing system according to the stored user application program installation configuration; and  
downloading the manifest file from the remote data processing system to the local data processing system.

10. (Previously presented) The method of claim 9 further comprising:  
authenticating the particular user in a second authentication responsive to the particular user requesting a build of the application program;  
decrypting the manifest file responsive to the second authentication; and  
building the application program pursuant to the user application program installation configuration decrypted from the manifest file responsive to the second authentication.

11. (Previously Presented) The method of claim 8 further comprising:  
recording a description of items that are being used by the particular user.

12. (Original) The method of claim 11 wherein the recorded description is used for administering licensing of the items.

13. (Original) The method of claim 9 wherein the remote server is a web server.

14. (Previously presented) The method of claim 8 wherein the user application program installation configuration comprises data describing the particular user, the particular

user's application program user configuration, and resources for which the particular user is authorized.

15. (currently amended) A computer system for installing an application program for execution on a data processing system, said computer system comprising:

- a user configuration of the application program installation corresponding to a particular user of the application program;

- a manifest file comprising an encrypted user application program installation configuration;

- a determination that the stored user application program installation configuration corresponds to the particular user;

- an authentication of the particular user in response to the particular user requesting the application program;

- a decryptor for decrypting the manifest file in response to the user authentication; and

- an application program builder for building the application ~~pursuant to~~ in a configuration customized to conform to the user application program installation configuration decrypted from the manifest file.

16. (Previously presented) The computer system of claim 15 wherein the data processing system is a local data processing system, said computer system further comprising:

- a remote server executing on a remote data processing system in which the user application program installation configuration is stored;

- a session between the local data processing system and the remote data processing system in response to the particular user requesting the local application program;

a downloader, responsive to the user authentication, for downloading data from the remote data processing system to the local data processing system according to the stored user application program installation configuration; and

a downloaded manifest file which is downloaded from the remote data processing system to the local data processing system.

17. (Previously presented) The computer system of claim 16 further comprising:  
a second authentication of the particular user responsive to the particular user requesting a build of the application program;  
a second decryptor, responsive to the second authentication, for decrypting the manifest file; and  
an application program builder, responsive to the second authentication, for building the application program pursuant to the user application program installation configuration decrypted from the manifest file.

18. (Previously Presented) The computer system of claim 15 further comprising a recording of a description of items that are being used by the particular user.

19. (Original) The computer system of claim 18 wherein the recorded description is used for administering licensing of the items.

20. (Original) The computer system of claim 16 wherein the remote server is a web server.

21. (Previously presented) The computer system of claim 15 wherein the user application program installation configuration comprises data describing the particular user, the
